SUMMARY

NYU Computer Science graduate student and **software engineer** with **3+ years of experience** building and scaling distributed systems and data pipelines processing billions of records in **Java**, **Python**, and **Kafka**. Deployed **JavaScript-based full-stack SaaS** internal tools on Google Cloud for NYU Admissions, achieving 4x performance gains. Focused on **backend engineering**, **microservices**, and data-intensive applications.

SKILLS

Languages: Java, Python, JavaScript (ES6+), C++, SQL, Bash, HTML/CSS, TypeScript

Frameworks & Backend: Spring Boot, JPA (Hibernate), REST APIs, MVC, Express.js, Swagger, Maven, Bootstrap, Node, React, FastAPI

Distributed Systems: Kafka, Hadoop, Spark, Apache Thrift

Data, ML & Analytics: TensorFlow, KERAS, NumPy, Pandas, SciPy, Scikit-Learn, GEOPANDAS, OpenCV, QDRANT, Pig, Hive, UNSLOTH, LangChain

Cloud, DevOps & Tools: AWS, GCP, BIGQUERY, PostgreSQL, MySQL, MongoDB, FIRESTORE, Docker, Version Control (Git, CI/CD), Postman, JIRA, IntelliJ, PyCharm, JUPYTER Notebook, Visual Studio Code, QGIS, JUnit, PYTEST, Agile, NoSQL, Cassandra

WORK EXPERIENCE

Full Stack Software Developer | [New York University](#), New York, NY

02/2025 – Present

- Migrated production **Google Apps Script** tools to a **Next.js** and **MongoDB** architecture, enabling real-time usage and consistent 60-second data sync
- Engineered a **fault-tolerant** form delivery system to handle concurrent submissions, cutting retry failures by 40% under peak load
- Owned the development of a **web-based email template service** with placeholder-driven rendering, allowing managers to author reusable templates that **auto-populate** user, credential, and device data, reducing email management effort by 55%
- Implemented a **label-based filtering system** combining UI/UX-driven column filters with backend query logic, enabling **compound filters** and reducing lookup time across 2,000+ records
- Enhanced data retrieval speed by 50% in **Google Apps Script** by replacing service-layer calls with direct **Sheets API** access

Software Development Engineer | [SAINAPSE](#), India

07/2022 – 05/2024

- Optimized microservice file transfers via **Apache Kafka** by implementing **byte-level serialization/deserialization** and parallel file distribution, reducing time complexity by 50% and space complexity by 33% on **AWS (Linux OS)**
- Spearheaded **HDFS** implementation in **Java** to support high-volume ingestion, storing 3B+ daily records with **Hive** across 10+ **microservices**, lifting average performance by 37%
- Designed a **batch data adapter** attached to **Google BIGQUERY tables**, enabling on-demand transfer of 2B+ rows and supporting downstream ML workflows such as free-text search and deduplication
- Accelerated data extraction speed from **3GB+ XLSX** and **DOCX** files by updating parsing logic with the **APRYSE Java SDK**, improving speed by 30%
- **Mentored** 4 university interns on product architecture and core technology stack, supporting independent feature delivery

Data Science Intern | [AIDASH](#), India

01/2022 – 06/2022

- Evaluated **ResNet** architectures with **KERAS** and **TensorFlow** for **LANDSAT** classification, achieving 60–75% accuracy
- Devised a **Python-based grassland classification** method to improve land ranking, achieving 78% accuracy, ranking 1st amongst peer solutions
- Coded a Python script to **automate** satellite image labeling in **QGIS**, reducing manual processing time by 80%
- Resolved **geospatial data handling** during onboarding by performing CRUD operations on 10,000+ shapefiles using **GEOPANDAS** and **PostgreSQL**

EDUCATION

NEW YORK UNIVERSITY, New York, NY, USA

09/2024 – 05/2026

M.S. in Computer Science | **Coursework:** Algorithms, ML, Options Pricing, Computer Vision

BIRLA INSTITUTE OF TECHNOLOGY AND SCIENCE, Pilani, India

08/2018 – 07/2022

B.E. in Computer Science | **Coursework:** Data Structures, Database Systems, Machine Learning, AI, NLP

PROJECTS

Apple Wallet Coupon Generator & Redemption System ([GitHub](#))

12/2024 – 01/2025

- Engineered a **backend service** to generate and redeem **Apple Wallet coupons** using Google Apps Script and the **PassKit API**, replacing manual coupon handling and issuing 500+ passes
- Implemented server-side validation, unique identifier generation, and redemption state tracking to **prevent duplicate or invalid coupon** use
- Built a **web-based interface** for non-technical staff to create, manage, and redeem coupons without developer involvement, reducing operational effort by 40%

Computer Vision Portfolio ([GitHub](#))

09/2025 – 12/2025

- Restored degraded 17k×11k astronomical plates using classical image processing, enabling reliable **template matching** and **geometric alignment**
- Developed multi-object tracking pipelines for baseball pitch analysis by combining **CNN-based detection** with **Kalman filtering** and **feature fusion**
- Trained **transfer-learning models** to classify U.S. states from street-view panoramas, implementing checkpointed training, resume logic, and automated inference pipelines
